Welcome to the 2009 Winter Institute on Statistical Literacy for Librarians (WISLL)

The 2009 Institute will be held
Wednesday, February 18 - Friday, February 20
at the University of Alberta, Edmonton, Canada

Librarians are facing more statistical information than ever before because of the electronic dissemination of statistics over the Internet. Concomitant with this are greater demands for statistics from user communities. Greater availability to statistics online, however, has not made this information necessarily easier to find or to retrieve. This Institute provides training in the strategies and tools for finding statistics and providing them in formats directly useful to users.

This Institute is valuable and relevant to professionals working in academic, public and special libraries.

Note: Because of limited enrollment, participants in previous workshops are kindly requested not to register in 2009. We appreciate your cooperation.

Registration is now open and limited.
