February 2012 2

Stat Lit IS NOT Mathematics

Statistical literacy, quantitative reasoning, quantitative literacy and numeracy:

1. have NO solid or rigorous definitions
2. are NOT centered on any algebraic or quantitative expressions.
3. are NOT defined like any other part of mathematics – by unique mathematics topics.

February 2012 3

Stat Lit IS NOT Mathematics

Statistical literacy, quantitative reasoning, quantitative literacy, numeracy:

- are NOT mathematics because

[Audience suggestions]

February 2012 4

Statistical Literacy

Statistical literacy is the ability to read and interpret summary statistics in the everyday media: in graphs, tables, statements, surveys and studies.

Statistical literacy is needed by data consumers – students in non-quantitative majors.

About 40% of all US college students graduating in 2003 had non-quantitative majors.

Statistical literacy studies all the influences on statistics.

February 2012 5

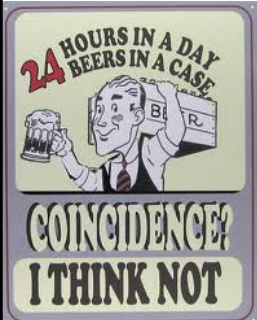

Statistical Literacy Is a part of Mathematics

Compared to QR, Quantitative Literacy or Numeracy, Statistical Literacy focuses

- Focuses more on chance
- Focuses more on what is taken into account

February 2012 6

Coincidence

February 2012 7

Coincidence?

3.14 → π → A.I.E

MOM WOW
coincidence? I think not!

February 2012 8

Seeing Coincidence

A3 =RANDBETWEEN(0,9)

Rice-10 sheet Find the largest group of high cells (red fill) that are touching each other.

a. touching on sides in a row b. touching on sides (but not just on points)

February 2012 9

Flip 8 sets of 3 coins each [24 flips]; A run of three heads is "expected"

Chance of 3 heads: one chance in eight.

1	2	3				1	2	3
1	2	3				1	2	3
1	2	3				1	2	3
1	2	3				1	2	3
1	2	3				1	2	3

February 2012 10

Run of at least three heads: "Expected" in 10 flips of fair coin

1		1	2	3							
2			2	3	4						
3				3	4	5					
4					4	5	6				
5						5	6	7			
6							6	7	8		
7								7	8	9	
8									8	9	10
All		1	2	3	4	5	6	7	8	9	10

Key is "Overlap"

February 2012 11

Coincidence: Mathematical Principle

Seen: unlikely conjunction
Unseen: # ways to generate that unlikely conjunction.

Mathematics reveals hidden connections.
N logical events (k at a time) map onto n physical events

$$n = N + k - 1. \quad n \ll N^*k; \quad n \sim N$$

$$10 = 8 + 3 - 1. \quad 10 \ll 24 [8*3]; \quad 10 \sim 8$$

Analogous to combinations vs. permutations.

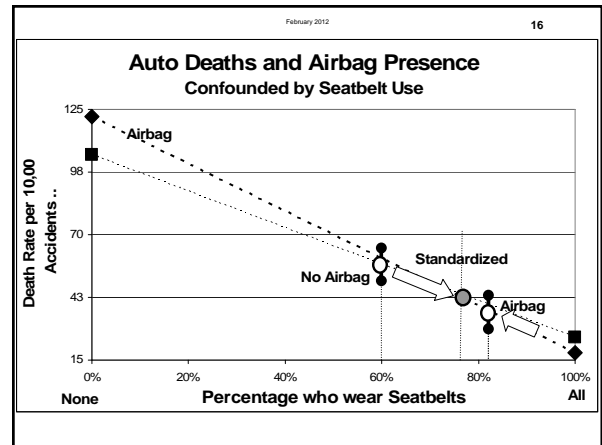

February 2012 12

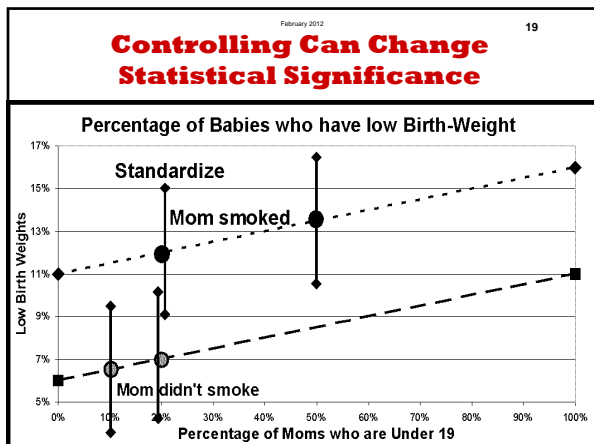

Size of a statistic depends on what is "taken into account"

State Prison Expense (1996)

State	Total	Compare	Inmates	Per Inmate	Compare
MN	\$184M	27% more	4,865	\$37,825	56% more
IA	\$144M	12% less	5,929	\$24,286	36% less

State	Total	Compare	Inmates	per Inmate	Compare
CA	\$2.9B	50% more	136K	\$21,385	25% less
NY	\$1.9B	34% less	69K	\$28,426	33% more

February 2012 20

Ratios: influenced by confounders Math-Stat Principles

Partial derivative can have
a different magnitude and
a different sign
than a total derivative.

Statistical significance can be influenced
by what is taken into account

February 2012

Conclusion

If courses or programs involving numeracy, quantitative literacy or statistical literacy are to survive – much less to thrive – they must be strongly supported by mathematics and statistics departments and faculty.

February 2012 22

Recommendation

Mathematics departments should give strong support for quantitative literacy courses and programs provided they embody high-level principles that are taught in upper-level math and stat courses – even if those principles are taught in an introductory manner.
