Paper at www.StatLit.org/pdf/2012Schield-MAA.pdf
Slides at www.StatLit.org/pdf/2012Schield-StatChat6up.pdf

March 2012 2

Coincidence?

March 2012 3

Coincidence?

3.14 → π

A I E

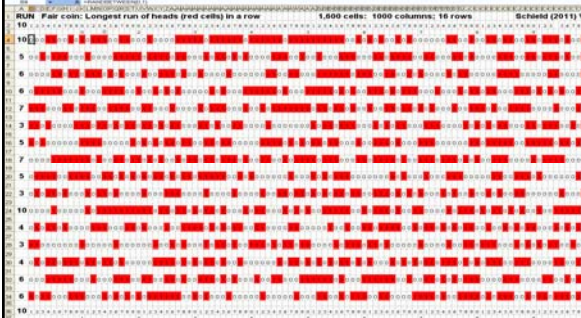

MOM →

← WOW

Coincidence? I think not!

March 2012

Chance: run of 10 heads? One chance in $2^{10} = 1,024$

March 2012

Three Heads in a Row

* has one chance in eight. $P = 1/8$

* is *expected* in 8 sets of three. $N = 1/(1/8) = 8$.

Binomial distribution: $N * P = \langle \text{Expected} \rangle = \text{Mean}$.

If $N = 1/P$, then $\langle \text{Exp} \rangle = 1$.

1	0	1		1	0	0
0	1	1		0	0	1
1	1	1		0	1	1
1	1	0		1	1	0

March 2012

Map 8 sets of 3 each onto 10 tries

Run of 3 heads is generally found in $(1/p)^k + (k-1)$ flips of a fair coin. Schield (2012) V1

Run	Coin #1	#2	#3	#4	#5	#6	#7	#8	#9	#10
3	1	1	1	0	0	0	0	0	0	0
1	1	0	1	0	0	0	0	0	0	0
2	0	1	1	0	0	0	0	0	0	0
3	0	0	1	1	1	0	0	0	0	0
2	0	0	0	1	1	0	0	0	0	0
1	0	0	0	0	1	1	0	0	0	0
2	0	0	0	0	0	1	1	1	0	0
2	0	0	0	0	0	0	1	1	1	0

Distribution of longest run of heads in a set of 3

Longest Run	0	1	2	3
Expect #	1	4	2	1
Pctg of 8	12.5%	50.0%	25.0%	12.5%
TTT		HHT, HTH,	HTH, THH	HHH

March 2012

Distribution of Longest Run of Successes

N=2: Counts: 1, 2, 1: TT; HT, TH; HH
 N = 3: Counts: 1, 4, 2, 1.
 0H: TTT. 1H: HTT, THT, TTH, HTH.
 2H: HHT, THH. 3H: HHH.

N = 10: 1, 143, 360, 269, 139, 64, 28, 12, 5, 2, 1.
 Mode=2, Median=3, Mean = 2.80.

Mean > 3, but close enough as a rule-of-thumb.

March 2012

Summary Statistics: Distribution of Longest Runs

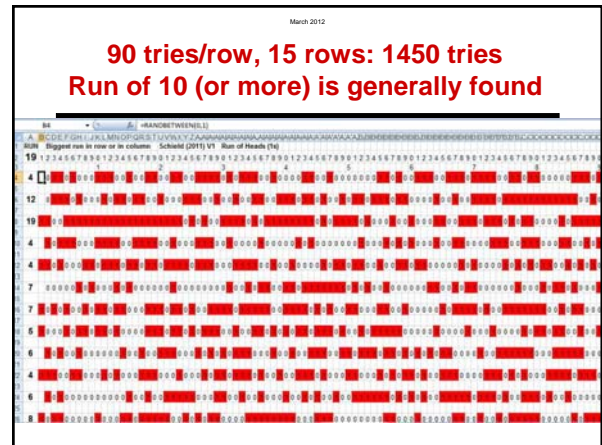

K	N	Mode	Median	Mean
3	8	2	2	2.51
4	16	3	3	3.43
5	32	4	4	4.38
6	64	5	5	5.35
7	128	6	6	6.34
8	256	7	7	7.32
9	512	8	8	8.3
10	1,023	9	9	9.26

March 2012 9

Runs: Adjacent Events

Law of Very-Large Numbers (Qualitative):
 The very unlikely is almost certain given enough tries

RUNS RULE-OF-THUMB:
 A run of events with 1 chance in N is *generally found* in N tries.

March 2012

Conclusion

Students need to “see” that coincidences

1. are more common than expected
2. depend on the context
3. compare ex-ante with ex-post
4. may still be signs of causation (Cholera)

That runs with 1 chance in N are generally found in N tries.

March 2012

Patterns in Rice

With rice scattered in two dimensions, people can often see shapes that are very unlikely.

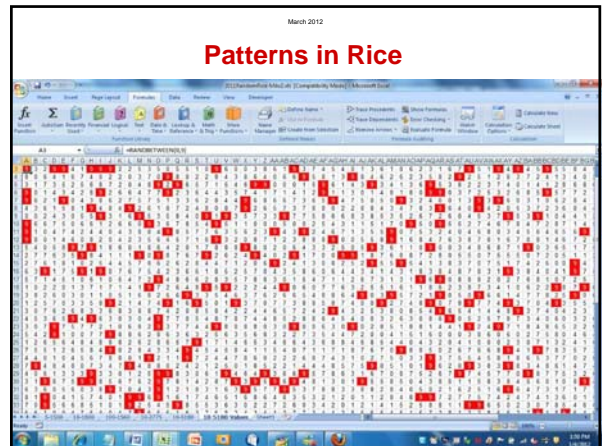

Let’s simulate rice in Excel where each cell has 1 chance in 10.

March 2012

Patterns in Rice: # Touching
2:1/100; 4:1/10,000; 6: 1/1,000,000

A3 =RANDBETWEEN(0,9)

	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R
3	9	3	2	9	9	4	1	9	9	9	2	2	5	3	5	0	5	5
4	8	0	6	4	1	6	7	4	0	2	2	0	3	7	0	9	8	0
5	3	1	7	3	5	2	5	6	8	7	2	0	4	8	9	2	9	6
6	9	0	1	4	3	4	2	8	9	2	6	6	4	7	7	9	2	3
7	9	6	2	1	9	0	4	3	8	6	2	7	5	7	5	1	3	3
8	4	3	6	1	5	8	1	9	4	8	4	9	2	6	1	8	7	2
9	0	0	2	4	3	0	5	9	3	1	6	9	5	3	5	8	4	8
10	9	6	6	7	5	0	6	6	1	2	6	6	0	9	3	6	7	8
11	9	1	0	4	7	4	2	4	4	0	4	3	8	8	4	9	8	5
12	9	8	0	1	4	6	0	8	2	0	4	2	3	5	6	4	5	7

March 2012

Patterns in Rice

In 2D, there are more ways for cells to connect:
 2 horizontally (left side or right side)
 2 vertically (above and below)
 4 vertices (NE, SE, SW and NW corners)
8 TOTAL ways two random cells can connect.

Chance that 6 cells with rice will touch:
 a. 1 in 10^6 : 1 in a million
 b. $(8-1)^6 = 262,144$

March 2012

Conclusion

Students need to “see” that coincidences

1. are more common than expected
2. depend on the context
3. compare ex-ante with ex-post
4. may still be signs of causation (Cholera)

That runs with 1 chance in N are generally found in N tries.

March 2012

The “Birthday” Problem

Q. What is the chance that two people in a group will have the same birth-date: month and day?
 A. One chance in 365?

March 2012 19

The "Birthday" Problem

Richard von Mises (1883-1953)

In a group of 28 people, a birthday match is "expected".

March 2012 20

The "Birthday" Problem Math Answer

If the chance of a rare event is p and $p = 1/k$, then this event is "expected" in k trials.

In a group of size N , there are $(N-1)(N/2)$ pairs.

Solve for $N(k)$. $k = (N-1)(N/2) = (N^2 - N)/2$

Quadratic: $N^2 - N - 2k = 0$

Estimate: $\sim N^2/2 = 1/p$.

Trial and error: $[27^2]/2 = 364 = 1/p = k$

Q. Are students convinced? No!!!

March 2012 21

March 2012 31

Connections and Chance

Pairs	GROUP	Details
196	Quadrants 1-4	49 pairs each
49	Side-to-Side	
49	Top-to-Bottom	
84	Within each side	21 pairs each
378	TOTAL	

A “birthday” match has one chance in 365.
 In a group of 28, we have 378 pairs: $(N-1)(N/2)$.
 A match is expected: Match is more likely than not.

March 2012

Conclusion

Students need to “see” that coincidences

1. are more common than expected
2. depend on the context
3. compare ex-ante with ex-post
4. may still be signs of causation (Cholera)

That runs with 1 chance in N are generally found in N tries.
